Try completing the following exercises for the next class.

1. Describe the components of a grammar and give a case to illustrate it.

2. Given a grammar G, describe the definition of its sentences, describe the definition of its language $L(G)$.

3. Construct grammars for the following languages

(1) $\{a^m|m\geq 1\}$

(2) $\{a^m b^m|m\geq 1\}$

4. Explain the following terms in the disciplines of grammar and language using cases.

(1) Derivation

(2) Recognization

5. Try to construct a grammar for the tokens "identifier", at least two algebraic operations, and "assignment symbol", and a grammar for the assignment statements using the tokens above. (****)

Notes: From the next time, those who actively answer questions that I left after class will receive additional points in the final assessment.
