

1.开场白

Good afternoon, my dear professors, it is a great honor to have an opportunity for this interview.

2.自我介绍

My name is **, I'm from the Central South University in ChangSha, Hunan Province. I'm majoring in powder materials, a branch of material science and engineering. By now I have finished my third year at college, I truly enjoyed the period I studied and lived there. But now I know it's time to find another place for further study, and that's why I'm coming here.

3.选择上海交大的原因

To enter Shang Hai Jiao Tong University has been my dream for several years. After the failure in college entrance examination 3 years ago, I didn't give up this goal, and I firmly believe the effort I paid in the past 3 years is quite worthy for this.

I choose this university for many reasons. Firstly, to tell the truth, I love and have great interest in this city, which is the most prosperous place in China. People here are always helpful, open-minded and well-educated. Every time I came here, I could always find something fresh, special or interesting, and my family has planned to move here in the near future. Furthermore, this is the best university here and famous all over the world, it can provide the students a higher and better platform for learning and doing research, and I believe more opportunities can be offered here. But the most important reason of my choice is that the Material Science and Engineering Department here ranks No.1 in China for many years, as I've determined to devote my whole life in this field, to enter this university should be the most smart and optimal decision.

4.自身的优势

To talk about myself, as you can see in my resume, I've been working diligently in the past 3 years, and achieve high marks in most of the courses. Especially in the third year, most of the courses are major courses, very few of them are below 90 marks, at present, I'm NO.2 in my department. So, I've build up a comparatively solid foundation for both basic and professional knowledge.

My greatest strength is when starting anything, I can always make a plan, long-term or short-term, then just stick to the schedule, this habit helps me accomplish everything in an orderly way. In my second year at college, I began to know the scientific research and began doing some experiments. So far, I've been working in two research groups, one is the research of gall-stone, another is about the hydrogen-storage alloy. In this process, I learned how to do basic scientific research, how to analyze and solve problems alone and how to cooperate with team members when fulfilling a task. Besides, I have absolute confidence in my English ability, and this gives me superiority in reading or translating foreign articles.

4.结束语

Finally, I am truly interested in this field of science and I believe interest can be a motivation for my further study. THANKS FOR YOUR PATIENCE.
