

Software Modeling and UML

Teamwork 2

Class Diagram Modeling

Objectives

- Based on the use case models constructed in previous experiments, conduct class diagram modeling to establish the basis for further design.
- Familiarize yourself with the general process of modeling class diagrams.
- Through discussions, become more acquainted with the use of UML tools, and master the representation of common modeling elements in class diagrams.

Task 1 Tennis Court Booking System (Teamwork)

- Enhance and refine the use case model for the Tennis Court Booking System.
- Based on discussions and the existing use case model, create class diagrams to establish the foundation for further design of the Tennis Court Booking System.

Task 2 Campus Information Platform (Teamwork)

- Enhance and refine the use case model for the Campus Information Platform.
- Based on discussions and the existing use case model of the Campus Information Platform, create class diagrams to establish the foundation for further design.

Task 3 Hospital Appointment and Registration System (Teamwork)

- Enhance and refine the use case model for the Hospital Appointment and Registration System.
- Based on discussions and the existing use case model of the Hospital Appointment and Registration System, create class diagrams to establish the foundation for further design.

Experiment requirements

- The team leader should submit the work through the link provided by the teaching assistant's cloud storage.
- Requirements for the report
 - Report name: UML Teamwork 2 Class Diagram (Student ID Name, Student ID Name, Student ID Name...) Task names
 - Please do not compress any document (不要压缩)
 - The deadline for task submission is 6 PM this Saturday evening
- Make sure to send the report following the specified guidelines; otherwise, we will not be able to receive your submission.

Notes

- Understand the relationships between classes during the class diagram modeling process.
- Experience the distinctions between the three perspectives of class diagrams during the modeling process.
- Determining classes is a critical and challenging task that requires careful consideration throughout the modeling process.
- Completing the class diagram modeling is just one outcome. It's crucial to grasp the intricacies of the process; the journey is more important than the end result.

Steps Of Class Diagram Modeling

- Conduct domain analysis to establish system requirements.
- Identify classes and their responsibilities, determine attributes and operations.
- Preliminarily establish relationships between classes.
- Refine the relationships between classes.
- Create the class diagram and provide the necessary textual description.
