

Software Modeling and UML

Teamwork 4

State Machine Diagram Modeling

Objectives

- Further understand the role of the State Machine Diagram
- Become more familiar with the use of UML tools, and master the representation of common modeling elements in State Machine Diagram

Task1: Tennis Court (Teamwork)

- Consider the several states of a Tennis Court in the Tennis Court Booking System, draw the state machine diagram to indicate the transition of states for a Tennis Court
- A Tennis Court may have different states
- Different transitions may occur between states
- You can define any reasonable details

Task2: Membership (Teamwork)

- Consider the several states of the membership of a student club in a Campus Information Platform
- Membership may have different states
- Different transitions may occur between states
- You can define any reasonable details

Task3: Patient (Teamwork)

- Design a state machine diagram to depict the various states of patients in the hospital appointment and registration system, as well as the transitions between these states.
- Consider the entire process from patients scheduling appointments with doctors to completing the registration, including states such as appointment, examination, payment, and registration.
- Define logical states and transitions, ensuring the system can smoothly handle the patients' appointment and registration processes.
- You can define any reasonable details.

Experiment requirements

- The team leader should submit the work through the link provided by the teaching assistant's cloud storage.
- Requirements for the report
 - Report name: UML Teamwork 4 State Machine Diagram (Student ID Name, Student ID Name, Student ID Name...) case name
 - Please do not compress any document (不要压缩)
 - The deadline for task submission is 6 PM this Saturday evening
- Make sure to send the report following the specified guidelines; otherwise, we will not be able to receive your submission.
